EVAIP Technical Design Space
WHAT (Ethical Values)
see Table 2
WHOSE Values (Stakeholders)
Individual
Group
Organisation
Society
WHICH (Engines)
Learning-based
Non-Learning-based
Hybrid
LLM- and Conversational-AI-based Alignment Mechanisms
Human Preferences & Feeback-driven Alignment
Model-Steering & Adaptable Mechanisms
RL-based Alignment
Task-Specific ML/DL Approches
Reasoning / Knowledge-based Approaches
Multi-modal & Generative Systems
Human-Robot-Interaction (HRI)
WHEN (Lifecycle Stage)
Pre-training
In-training
Post-training
Runtime
Post-Deployment Operations & Iterations
Data Constitution
Norm Specification
Environment &Task Design
Supervised & Preference-based Optimisation
Reward, Cost & Representation Learning
Constrained Poilcy Optimisation
Benchmark-based Assurance
Adversarial & Harm-Oriented Assurance
Human-Centred Evaluations
Simulation-based Verification
Runtime Oversight Mechanisms
Inference-Time Conditioning & Steering
Activation-based & Decoding-based Controls
Action-time Adaptation
HOW (Technique)
Explicit Natural Language Representations
External Artefact Representations
Latent and Representation-Level Encoding
Preference-Based Representations
Objective and Reward-Based Representations
Constraint and Environment-Based Representations
Value Signal Construction
